## If the Cold War ended in a full-scale nuclear confrontation. Nuclear artillery ammunition was shown at the Army 2022 forum

2022-08-18 at 5:59, categories: News, admin

Rosatom, within the framework of the international forum "Army-2022", for the first time presented samples of Soviet nuclear artillery ammunition for firing from large-caliber guns: the Soviet Union developed not only strategic nuclear weapons delivered to enemy territory using intercontinental ballistic missiles, but also nuclear ammunition for use in local conflict.

One of them, according to Rosatom, is the smallest nuclear artillery munition RD4-01, with a caliber of 152 mm. As noted on the information stand, the projectile was intended for firing from the D-20 howitzer, but could potentially be used by other systems of a similar caliber: Msta-B, Msta-S, Akatsiya howitzers, Giatsint-B cannons and "Gyacinth-S" and others.

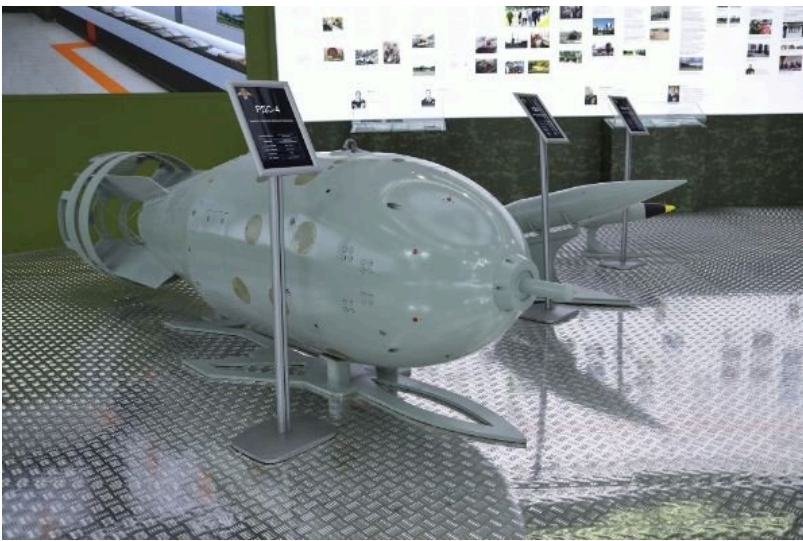

The power of the nuclear charge in TNT equivalent is 2.6 kilotons. The ammunition was produced until 1985, and was in service until 1990.

The second nuclear weapon shown at the exhibition was the RD5-1 203 mm caliber - the first of its kind. It was in service from 1972 to 1985, and was produced until 1980.

The charge power is 2 kilotons. It was intended for the B-4M artillery system, but is also suitable for other artillery pieces with a similar caliber: the Pion self-propelled artillery mount and its Malka modification.

In addition, the Rosatom exposition included the RA-82 nuclear weapon with a power of 1 megawatt for the monoblock warhead of the R-27 ballistic missile and the first serial tactical atomic bomb RDS-4 to equip the Il-28 front-line bomber. The latter was produced from 1954 to 1960 and was in service until 1965. The power of the nuclear charge in it reaches 30 kilotons.
